

### MAULANA AZAD NATIONAL INSTITUTE OF TECHNOLOGY, Bhopal - 462003

# DEPARTMENT OF MECHANICAL ENGINEERING M.Tech in Automation and Robotics

#### PROPOSED SCHEME M.Tech (w.e.f. July 2024)

#### **First Semester:**

| Course                  | Subject  | Schemes of studies            |                  |    | Total |
|-------------------------|--|-------------------------------|------------------|----|-------|
| No.                     |  | per                           | periods per week |    |       |
|                         |  | L                             | T                | P  |       |
| AR24511                 | Metaheuristic Techniques                           | 3                             | -                | -  | 3     |
| AR24512                 | Fundamentals in Robotics                           | 3                             | -                | -  | 3     |
| AI24562                 | Sensors, Microcontrollers, and<br>Embedded Systems | 3                             | -                | -  | 3     |
|                         | Departmental Elective – 1                          | 3                             | -                | -  | 3     |
|                         | Departmental Elective – 2                          | 3                             | -                | -  | 3     |

### Lecture Plan (about 40-50 Lectures):

| Lecture No. | Topic  | Remarks |
|-------------|--|---------|
| 1.          | Introduction, what is Soft Computing?                  |         |
| 2.          | Difference between Hard and Soft computing,            |         |
| 3.          | Requirement of Soft computing,                         |         |
| 4.          | Major Areas of Soft Computing,                         |         |
| 5.          | Applications of Soft Computing                         |         |
| 6.          | What is Neural Network,                                |         |
| 7.          | Learning rules and various activation functions,       |         |
| 8.          | Single layer Perceptrons                               |         |
| 9.          | Back Propagation networks,                             |         |
| 10.         | Architecture of Back propagation (BP) Networks,        |         |
| 11.         | Back propagation Learning,                             |         |
| 12.         | Variation of Standard Back propagation Neural Network, |         |
| 13.         | Introduction to Associative Memory,                    |         |
| 14.         | Adaptive Resonance theory and Self Organizing Map,     |         |
| 15.         | Recent Applications                                    |         |
| 16.         | Fuzzy Set theory,                                      |         |
| 17.         | Fuzzy versus Crisp set,                                |         |
| 18.         | Fuzzy Relation,  |         |
| 19.         | Fuzzification, Minmax Composition,                     |         |
| 20.         | Defuzzification Method, Fuzzy Logic,                   |         |
| 21.         | Fuzzy Rule based systems, Predicate logic,             |         |
| 22.         | Fuzzy Decision Making,                                 |         |
| 23.         | Fuzzy Control Systems,                                 |         |
| 24.         | Fuzzy Classification                                   |         |
| 25.         | History of Genetic Algorithms (GA),                    |         |
| 26.         | Working Principle, Various Encoding methods,           |         |
| 27.         | Fitness function, GA Operators- Reproduction,          |         |
| 28.         | Crossover, Mutation, Convergence of GA,                |         |
| 29.         | Bit wise operation in GA,                              |         |
| 30.         | Multi-level Optimization                               |         |
| 31.         | Sequential Hybrid Systems, Auxiliary Hybrid Systems,   |         |
| 32.         | Embedded Hybrid Systems                                |         |
| 33.         | Neuro-Fuzzy Hybrid Systems,                            |         |
| 34.         | Neuro-Genetic Hybrid Systems,                          |         |

| 35. | Fuzzy-Genetic Hybrid Systems.    |
|-----|----------------------------------|
| 36. | LR type Fuzzy numbers,           |
| 37. | Fuzzy Neuron,                    |
| 38. | Fuzzy BP Architecture,           |
| 39. | Learning in Fuzzy BP,            |
| 40. | Application of Fuzzy BP Networks |

| Sl. No. | Name of Examination               | Marks Allotted | Remarks |
|---------|-----------------------------------|----------------|---------|
| 1       | Mini Test                         | 10             |         |
| 2       | Mid Semester Test                 | 20             |         |
| 3       | Assignment if any                 | 10             |         |
| 4       | Tutorial if any                   |                |         |
| 5       | Quiz if any                       | 10             |         |
| 6       | Seminar, Viva voce if ay          |                |         |
| 7       | End Semester Examination          | 50             |         |
| 8       | Experiments if any (for practical |                |         |
|         | courses)                          |                |         |
| 9       | Any other                         |                |         |

| Name of Program         | M. Tech in<br>Automation and<br>Robotics | Semester-I | Year- I |  |
|-------------------------|--|------------|---------|--|
| Name of Course          | Fundamentals in Robotics                 |            |         |  |
| Course Code             | AR24512                                  |            |         |  |
| Core / Elective / Other | Core                                     |            |         |  |

| Prerequ    | uisite if any:  |
|------------|---|
| 1.         | Students should have knowledge on Theory of Machines  |
| 2          | Students should have knowledge on Basic mathematics such as, Matrices,  |
| 2.         | Differentiation and Integration   |
| Course     | Outcomes: At the end of the course, the student will be able to:  |
| CO1        | Understand robots and their kinematics.   |
| CO2        | Formulate the solutions for determining the position and orientation of the end   |
| CO2        | effector using mathematical concepts.   |
| CO3        | Select the suitable grippers and tools for suitable applications.   |
| CO4        | Acquire knowledge about various sensors & working of actuators.   |
| CO5        | Understand the concept of robots used for various industrial applications.  |
| CO6        | Awareness, knowledge and various industrial and non-industrial applications of automation.  |
| Descrip    | tion of Contents in brief:  |
| Unit 1     | Automation: Industrial definition, advantages, goals, types, need, principles and   |
|            | elements of automation, Strategies of automation in Production System. Levels   |
|            | of automations. Role of robotics in Industrial Automation.  |
| Unit 2     | Introduction to robotics: Historical development of Robotics, Definition, type  |
|            | and classification of robots, Robot Joints and symbols, Degrees of Freedom,   |
|            | Robot configurations, Robot Components, Work space and work envelope,   |
|            | Robot reference frames, Resolution, accuracy and precision of robot.  |
| Unit 3     | Robot Kinematics - Manipulators Kinematics, Rotation, Translation, Rotation   |
|            | Matrix multiple transformation, Homogenous Transformation Matrix, Direct and  |
|            | Kinematics for industrial robots. D-H representation of robots.   |
| Unit 4     | Drive system- hydraulic, pneumatic and electric systems, Sensors – Touch  |
|            | sensors, Tactile sensor, Proximity and range sensors, Robotic vision sensor,  |
| T1 .4 F    | Force sensor, Light sensors, Pressure sensors.  |
| Unit 5     | End effectors - Mechanical, Adhesive, Vacuum, Magnetic grippers. Gripper  |
| Unit 6     | design. Active and passive grippers. Robot Inverse kinematics.  |
| Omto       | Differential Kinematics for planar serial robots, Basics of Trajectory Planning. Industrial case examples on automation and robotics applications.                      |

| 7.      | Concepts of work space, basic robot motions  |                |  |  |  |  |  |
| 8.      | Coordinate frames, mappings: changing descriptions from frame to frame                                   |                |  |  |  |  |  |
| 9.      | Translations, rotations and transformations, kinetic modelling of<br>the manipulator, D-H representation |                |  |  |  |  |  |
| 10.     | Forward kinematics, inverse kinematics, classification of end effectors, tools etc.                      |                |  |  |  |  |  |
| 11.     | Translations, Rotations and Transformations,   |                |  |  |  |  |  |
| 12.     | Kinematic Modelling of the manipulator, D-H Representation,  |                |  |  |  |  |  |
| 13.     | Drive system for grippers, Mechanical  |                |  |  |  |  |  |
| 14.     | Adhesive, Vacuum, Magnetic grippers.   |                |  |  |  |  |  |
| 15.     | Gripper force analysis and gripper design.   |                |  |  |  |  |  |
| 16.     | Gripper force analysis and gripper design.   |                |  |  |  |  |  |
| 17.     | Active and passive grippers.   |                |  |  |  |  |  |
| 18.     | Introduction to Jacobian, Jacobians for serial manipulators,   |                |  |  |  |  |  |
| 19.     | Jacobians for serial manipulators, inverse Jocobian  |                |  |  |  |  |  |
| 20.     | Lagrangian formulation for equations of motion for serial manipulators (Energy method)                   |                |  |  |  |  |  |
| 21.     | Lagrangian-Euler dynamic model (Matrix Method),  |                |  |  |  |  |  |
| 22.     | Trajectory planning  |                |  |  |  |  |  |
| 23.     | Introduction to actuators and sensors,   |                |  |  |  |  |  |
| 24.     | Pneumatic actuators  |                |  |  |  |  |  |
| 25.     | Hydraulic actuators  |                |  |  |  |  |  |
| 26.     | Electrical actuators   |                |  |  |  |  |  |
| 27.     | Sensors. Types and applications  |                |  |  |  |  |  |
| 28.     | Position sensors,  |                |  |  |  |  |  |
| 29.     | Potentiometers,  |                |  |  |  |  |  |
| 30.     | Force sensors,   |                |  |  |  |  |  |
| 31.     | Encoders   |                |  |  |  |  |  |
| 32.     | Introduction to control systems, Open loop and closed loop   |                |  |  |  |  |  |
|         | systems.   |                |  |  |  |  |  |
| 33.     | Robot applications in Machining  |                |  |  |  |  |  |
| 34.     | Robot applications in Welding  |                |  |  |  |  |  |
| 35.     | Robot applications in Assembly and Material handling   |                |  |  |  |  |  |
| 36.     | Robot applications in Loading and unloading and spray painting   |                |  |  |  |  |  |
| 37.     | Robot applications in Medical, Mining and Space  |                |  |  |  |  |  |

| 38.        | Robot applications in Underwater and Defense. |  |

| Course          | <b>Outcomes:</b> At the end of the course, the student will be able to:  |  |  |  |  |
|                 | Explain the micro-controllers, robotics, embedded system, and their  |  |  |  |  |
| CO <sub>1</sub> | 1 applicability.   |  |  |  |  |
|                 |  |  |  |  |  |
| CO2             | Build the various robots using Robot Operating System.   |  |  |  |  |
|                 | The state of the s |  |  |  |  |
| CO <sub>3</sub> | Implement the various Robotics system using microcontroller and ROS.   |  |  |  |  |
| Docarin         | ition of Contents in brief:  |  |  |  |  |
| Unit 1          | Application of microcontrollers, Embedded system, application of robotics,   |  |  |  |  |
| Omt 1           | Arduino: architecture, serial port, serial communication, device control using   |  |  |  |  |
|                 | serial communication, Arduino sensors, humidity, temp., water detector,  |  |  |  |  |
|                 | ultrasonic, LDR, Arduino secondary integration, relay, DC motor etc., pulse  |  |  |  |  |
|                 | width modulation (PWM)   |  |  |  |  |
| Unit 2          | I2C communication protocol, B1750; digital light sensor, parallel  |  |  |  |  |
|                 | communication, Arduino UART, GSM, GPRS module, Raspberry Pi:   |  |  |  |  |
|                 | Architecture, raspberry pi port identification, raspberry pi GPIO, transistorized  |  |  |  |  |
|                 | switching, accepting digital input on raspberry pi, enabling I2C to Raspberry Pi,  |  |  |  |  |
|                 | Analog, and digital sensors, BMP 180 with pi.  |  |  |  |  |
| Unit 3          | Sensors interface with Pi LDR, Sensors interface with Pi DHTT11, Sensors   |  |  |  |  |
|                 | interface with Pi using sense HAT, Fundamentals of Robotics, Robot Operating   |  |  |  |  |
|                 | System (ROS), ROS Essentials: ROS Topics, ROS: Services, Actions, Nodes,   |  |  |  |  |
| TT 14 4         | Build Robot Environment  |  |  |  |  |
| Unit 4          | Unified Robot Description Format (URDF), ROS parameter server, ROS   |  |  |  |  |
|                 | Services, and parameters, Recording and playing back, reading messages from a bag file, using rosed to edit files in ROS, ROS msg and srv.   |  |  |  |  |
| Unit 5          | Simple Publisher and Subscriber, Examining the Simple Publisher and  |  |  |  |  |
| Cint 5          | Subscribe, Simple Service and Client, Examining the Simple Service and   |  |  |  |  |
|                 | Client, Motion in ROS (ROS Noetic), Working with Pluginlib, Nodelets, and  |  |  |  |  |
|                 | Gazebo Plugins, Robot Navigation (moveit), Grasping, Grasping using  |  |  |  |  |
|                 | MoveIt!, Creating a pick and place task, Grasping in the Real Robot, ROS   |  |  |  |  |
|                 | Controllers and Visualization Plugins.   |  |  |  |  |
| List of         | Text Books:  |  |  |  |  |
| 1.              | Simon Monk, Raspberry Pi Cookbook: Software and Hardware Problems and  |  |  |  |  |
|                 | Solutions 3rd Edition,O'Reilly Media, 2019. ISBN: 978-1492043225.  |  |  |  |  |
| 2.              | Wyatt Newman, A Systematic Approach to Learning Robot Programming with   |  |  |  |  |
| T               | ROS (1 ed.), Chapmanand Hall/CRC, 2017. ISBN 9781498777827.  |  |  |  |  |
|                 | Reference Books:   |  |  |  |  |
| 1.              | Anis Koubaa, Robot Operating System (ROS): The Complete Reference  |  |  |  |  |
| TIDT a:         | (Volume 2), Springer, 2017,ISBN: 3319549286.   |  |  |  |  |
| URLs:           | Dlan (about 40 50 Lastumes).   |  |  |  |  |
| Lecture         | e Plan (about 40-50 Lectures):   |  |  |  |  |
| Lecture         | Topic Remarks  |  |  |  |  |

| No.        |   |
|------------|---|
| 1.         | Automation, Industrial Definition, advantages, goals              |
| 2.         | Types, needs, principles, and elements of automation              |
| 3.         | Strategies of automation in production systems                    |
| 4.         | Levels of automations. Role of robotics in Industrial Automation. |
| 5.         | Introduction to Robotics, History, Laws.                          |
| 6.         | Automation, Classifications by coordinate system, robot           |
|            | Components  |
| 7.         | Concepts of work space, basic robot motions                       |
| 8.         | Coordinate frames, mappings: changing descriptions from frame     |
|            | to frame  |
| 9.         | Translations, rotations and transformations, kinetic modelling of |
|            | the manipulator, D-H representation                               |
| 10.        | Forward kinematics, inverse kinematics, classification of end     |
|            | effectors, tools etc.   |
| 11.        | Translations, Rotations and Transformations,                      |
| 12.        | Kinematic Modelling of the manipulator, D-H Representation,       |
| 13.        | Drive system for grippers, Mechanical                             |
| 14.        | Adhesive, Vacuum, Magnetic grippers.                              |
| 15.        | Gripper force analysis and gripper design.                        |
| 16.        | Gripper force analysis and gripper design.                        |
| 17.        | Active and passive grippers.                                      |
| 18.        | Introduction to Jacobian, Jacobians for serial manipulators,      |
| 19.        | Jacobians for serial manipulators, inverse Jocobian               |
| 20.        | Lagrangian formulation for equations of motion for serial         |
| 21         | manipulators (Energy method)                                      |
| 21.        | Lagrangian-Euler dynamic model (Matrix Method),                   |
| 22.        | Trajectory planning   |
| 23.        | Introduction to actuators and sensors,                            |
| 24.        | Pneumatic actuators  Hadronic actuators                           |
| 25.        | Hydraulic actuators  Floatrical actuators                         |
| 26.        | Electrical actuators  |
| 27.<br>28. | Sensors. Types and applications  Position sensors,                |
| 29.        | Potentiometers,   |
| 30.        | Force sensors,  |
| 31.        | Encoders  |
| 32.        | Introduction to control systems, Open loop and closed loop        |
| 34.        | systems.  |
| 33.        | Robot applications in Machining                                   |
| 34.        | Robot applications in Welding                                     |
| 35.        | Robot applications in Assembly and Material handling              |
| 36.        | Robot applications in Loading and unloading and spray painting    |
| 37.        | Robot applications in Medical, Mining and Space                   |
| 38.        | Robot applications in Underwater and Defense.                     |
| 50.        | Troot approurions in Chaor water and Derense.                     |

Name of Program M.Tech Semester: II Year: I

Name of Course Computer Vision

Course Code AI24522

**Core / Elective / Other** Elective

### **Prerequisite:**

- 1. Good Knowledge of digital Image Processing, Matlab programing
- 2. Linear algebra, Probabilities and Statistics
- **3.** (Computer graphics), (Mathematical Methods for Visual Computing), or equivalent courses from other departments. I will expect you to be familiar with the Fourier transform (or be willing to learn it quickly), and basic linear algebra (eigen-analysis, matrix inverse)

#### **Course Outcomes:**

- 1. Recognize and describe both the theoretical and practical aspects of computing with images. Connect issues from Computer Vision to Human Vision.
- **2.** Describe the foundation of image formation and image analysis. Understand the basics of 2D and 3D Computer Vision.
- **3.** Become familiar with the major technical approaches involved in computer vision. Describe various methods used for registration, alignment, and matching in images.
- **3.** Get an exposure to advanced concepts leading to object and scene categorization from images.
- **4.** Build computer vision applications.

### **Description of Contents in brief:**

1. Digital Image Formation and low-level processing:

Overview and State-of-the-art, Fundamentals of Image Formation, Transformation: Orthogonal, Euclidean, Affine, Projective, etc. Fourier Transform, Convolution and Filtering, Image Enhancement, Restoration, Histogram Processing.

2. Depth estimation and Multi-camera views, Multiple View Geometry

Perspective, Binocular Stereopsis: Camera and Epipolar Geometry; Homography, Rectification, DLT, RANSAC, 3-D reconstruction framework; Auto-calibration.

3. Feature Extraction

Edges - Canny, LOG, DOG; Line detectors (Hough Transform), Corners - Harris and Hessian Affine, Orientation Histogram, SIFT, SURF, HOG, GLOH, Scale-Space Analysis-Image Pyramids and Gaussian derivative filters, Gabor Filters and DWT.

4. Image Segmentation

Region Growing, Edge Based approaches to segmentation, Graph-Cut, Mean-Shift, MRFs, Texture Segmentation; Object detection.

### 5. Pattern Analysis

Clustering: K-Means, K-Medoids, Mixture of Gaussians, Classification: Discriminant Function, Supervised, Un-supervised, Semi-supervised; Classifiers: Bayes, KNN, ANN models; Dimensionality Reduction: PCA, LDA, ICA; Non-parametric methods.

#### 6. Motion Analysis

Background Subtraction and Modeling, Optical Flow, KLT, Spatio-Temporal Analysis, Dynamic Stereo; Motion parameter estimation.

### 7. Shape from X

Photometric Stereo; Use of Surface Smoothness Constraint; Shape from Texture, color, motion and edges.

### **List of Text Books:**

- 1. Digital Image Processing using MATLAB, By: Rafael C. Gonzalez, Richard Eugene Woods, 2nd Edition, Tata McGraw-Hill Education 2010
- **2.** Richard Szeliski, Computer Vision: Algorithms and Applications, Springer-Verlag London Limited 2011.
- 3. Computer Vision: A Modern Approach, D. A. Forsyth, J. Ponce, Pearson Education, 2003.

### **List of Reference Books:**

- 1. Richard Hartley and Andrew Zisserman, Multiple View Geometry in Computer Vision, Second Edition, Cambridge University Press, March 2004.
- **2.** K. Fukunaga; Introduction to Statistical Pattern Recognition, Second Edition, Academic Press, Morgan Kaufmann, 1990.
- **3.** R.C. Gonzalez and R.E. Woods, Digital Image Processing, Addison-Wesley, 1992.

### **IoT (Internet of Things)**

Name of Program: M.Tech.

Name of Course IoT (Internet of Things)

Course Code AI24577 Core / Elective / Other Group A: Electives

**Prerequisite:** 

1. Programming Languages

### **Course Outcomes:**

- 1. Upon completion of this course, students will be able to understand the technology and standards relating to IoTs.
- **2.** Ability to develop prototypes for the applications of IoT in real time scenarios.
- **3.** Ability to analyze IoT data

# **Description of Contents in brief:**

- 1. Introduction of IoT, IoT Building Blocks
- 2. Sensors and Actuators
- 3. Microcontrollers and IoT Boards
- **4.** Networks for IoT
- **5.** Edge/Fog Computing, Cloud Computing
- **6.** Introduction to IoT Data Analytics and Machine Learning
- **7.** Various Applications of IoT

### **List of Reference Books:**

- 1. "The Internet of Things: Enabling Technologies, Platforms, and Use Cases", by Pethuru Raj and Anupama C. Raman (CRC Press)
- 2. "Internet of Things: A Hands-on Approach", by Arshdeep Bahga and Vijay Madisetti (Universities Press)

# **Lecture Plan (about 40-50 Lectures):**

| Lecture No. | Торіс  | Remarks |
|-------------|--|---------|
| 1.          | Introduction to Additive Manufacturing: Inception of rapid   |         |
|             | prototyping, From prototyping to manufacturing,  |         |
| 2.          | Basic principle of additive manufacturing, Fundamental difference  |         |
|             | between additive manufacturing and subtractive manufacturing,  |         |
| 3.          | Generic process flow of Additive Manf. process, Steps of AM,   |         |
| 4.          | Key considerations in AM steps: Orientation,   |         |
| 5.          | Slicing and supported/supportless building,  |         |
| 6.          | Classification of Additive Manufacturing processes, Solid based AM processes,                              |         |
| 7.          | Liquid-based AM processes,   |         |
| 8.          | Powder based AM processes  |         |
| 9.          | Additive Manufacturing Materials: Materials for solid-based processes: Polymers and copolymers,            |         |
| 10.         | Materials for solid-based processes: Metals, Composites, Nanocomposites                                    |         |
| 11.         | Materials for liquid-based processes: Photopolymer resins, Colloidal suspensions, Biocompatible materials, |         |
| 12.         | Materials for powder-based processes: Polymeric powders,   |         |
| 13.         | Materials for powder-based processes: Metallic powders, Metal alloys                                       |         |
| 14.         | Selection criterion and influence of Process Parameters for additive manufacturing:                        |         |
| 15.         | Machine parameters: Machine parameters for solid, liquid and powder-based processes,                       |         |
| 16.         | Software parameters: layer thickness, Infill density, raster angle, build orientation, infill pattern.     |         |
| 17.         | Computer-aided-design for additive manufacturing: Understanding the basics of CAD concepts,                |         |
| 18.         | Data exchange formats,   |         |
| 19.         | AM file format, Tessellated models, STL File issues,   |         |
| 20.         | STL File manipulation and repair algorithms,   |         |
| 21.         | Design for additive manufacturing, AM data processing: Calculating and Sorting the intersection points,    |         |
| 22.         | Constructing a two-dimensional contour and generating support structure,                                   |         |
| 23.         | Fundamentals of adaptive slicing,  |         |

| BHOPAL - 462003 |  |  |  |  |
|-----------------|--|--|--|--|
| 24.             | AM Weakness/difficulties: Volumetric Error, Shape deviation,   |  |  |  |
| 25.             | AM Weakness/difficulties: Surface roughness, Material shrinkage or swelling, Staircase effect, Warpage, etc.,          |  |  |  |
| 26.             | Reverse engineering in AM: Point cloud and point cloud to the object,  |  |  |  |
| 27.             | Software solutions for AM  |  |  |  |
| 28.             | Post processing and economical aspect of AM parts: Post-processing: polishing, abrasive flow, chemical treatment, etc, |  |  |  |
| 29.             | Ease of post-processing: soluble and breakaway support, etc.,  |  |  |  |
| 30.             | Post-processing challenges,  |  |  |  |
| 31.             | Rapid Tooling (RT): advantages and constraints,  |  |  |  |
| 32.             | Methods of RT,   |  |  |  |
| 33.             | Methods of RT,   |  |  |  |
| 34.             | AM benchmarks parts and types,   |  |  |  |
| 35.             | Cost model,  |  |  |  |
| 36.             | Build time model,  |  |  |  |
| 37.             | Break-even analysis for product-AM technology fit  |  |  |  |
| 38.             | Additive manufacturing in Smart Manufacturing/Industry 4.0   |  |  |  |
| 39.             | Application of AM in: Prototyping,   |  |  |  |
| 40.             | Application of AM: rapid tooling,  |  |  |  |
| 41.             | Application of AM: direct part fabrication,  |  |  |  |
| 42.             | AM applications in aerospace industry,   |  |  |  |
|                 |  |  |  |  |

| Course Outcomes: At the end of the course, the st | udent shall be able to:  |                     |        |  |  |
| 1. Identify the challenge                         | es of micro/nano domain of   | manufacturing       |        |  |  |
| <b>2.</b> Apply the knowledge                     | e of advance machining prod  | cesses in micro don | nain   |  |  |
| 3. Understand the app                             | Understand the application of different machining processes for nano-finishing |                     |        |  |  |
| <b>4.</b> Utilize the concept of                  | Utilize the concept of forming and welding in micro-manufacturing scale        |                     |        |  |  |
| <b>5.</b> Determine the dimen                     | Determine the dimensional measurement related to micro manufacturing           |                     |        |  |  |
| <b>Description of Contents in b</b>               | rief:  |                     |        |  |  |

| Unit 1.   | Micro-                       | Introduction and classification of micro-manufacturing, Challenges in Meso-, Micro-, and Nano-manufacturing. Traditional micro-machining:- Micro-turning, Micro-milling, Micro-grinding. |                   |  |  |  |  |
|-----------|------------------------------|--|-------------------|--|--|--|--|
| Unit 2.   | Advand<br>Electro<br>micron  | Advanced Micro-machining processes:- Electric discharge micromachining, Electrochemical micromachining, Micro Machining, Chemical and Electro Chemical Micro Machining                   |                   |  |  |  |  |
| Unit 3.   | rheolog<br>Polishi           |  | mo mechanical     |  |  |  |  |
| Unit 4.   | structu<br>Imprin<br>for mic | O FORMING AND WELDING - Micro extrusion, Micro and Nored surface development by Nano plastic forming and Rolle ting, Micro bending with LASER—LASER micro welding, crowelding            | r<br>Electronbeam |  |  |  |  |
| Unit 5.   | Micro/                       | NT TRENDS AND APPLICATIONS - Dimensional Metr<br>Mesoscale Manufacturing, Generalized applications   | ology for         |  |  |  |  |

# **Lecture Plan (about 36-42 lectures)**

| Lecture<br>No. | Торіс  | Remarks |
|----------------|--|---------|
| 1              | Introduction: Mechatronics   |         |
| 2              | History, applications, and trends  |         |
| 3              | Definition of Mechanical Systems,  |         |
| 4              | Systems and Design: Mechatronic approach                                     |         |
| 5              | Integrated Product Design  |         |
| 6              | Modeling, Analysis and Simulation  |         |
| 7              | Man-Machine Interface.   |         |
| 8              | Fundamental of electronics for Mechatronics                                  |         |
| 9              | Data conversion devices  |         |
| 10             | Sensors, microsensors, transducers   |         |
| 11             | Electrical contacts, actuators, and switches                                 |         |
| 12             | Contactless input devices  |         |
| 13             | Signal processing devices  |         |
| 14             | Relays, contactors, timers, output devices. Microprocessors and controllers. |         |
| 15             | Sensors and transducers: Classification                                      |         |
| 16             | Development in Transducer technology,  |         |
| 17             | Sensors for - Position & Speed Measurement                                   |         |
| 18             | Stress & Strain measurement  |         |

| 19 | Temperature Measurement,  |  |  |  |
|----|---|--|--|--|
| 20 | Vibration & Acceleration measurement  |  |  |  |
| 21 | Opto- Electronics-Shaft encoders,   |  |  |  |
| 22 | Vision System   |  |  |  |
| 23 | Introduction to pneumatic and hydraulic actuators                             |  |  |  |
| 24 | Pneumatics: Production, distribution and conditioning of compressed air       |  |  |  |
| 25 | Control valves  |  |  |  |
| 26 | Cylinders and rotary actuators for pneumatics and hydraulics.                 |  |  |  |
| 27 | Hydraulics: Hydraulic elements, walls, actuators, and various other elements. |  |  |  |
| 28 | Hydraulic powder packs  |  |  |  |
| 29 | Hydraulic pumps.  |  |  |  |
| 30 | Design of hydraulic circuits.   |  |  |  |
| 31 | Introduction to microcontrollers  |  |  |  |
| 32 | Introduction to use of open-source hardware (Arduino & Raspberry Pi)          |  |  |  |
| 33 | Shields/modules for GPS, GPRS/GSM,  |  |  |  |
| 34 | Bluetooth, RFID, and Xbee, integration with wireless networks,                |  |  |  |
| 35 | Databases and web pages.  |  |  |  |
| 36 | Basic closed-loop control: open-loop, on-off                                  |  |  |  |
| 37 | PID control   |  |  |  |
| 38 | Mechatronic systems integration.  |  |  |  |

| Sl.No. | Name of Examination                        | Marks    | Remarks |
|--------|--|----------|---------|
|        |  | Allotted |         |
| 1      | Mini Test                                  | 10       |         |
| 2      | Mid Semester Test                          | 20       |         |
| 3      | Assignment if any                          | 10       |         |

| 8      | Experiments if any (for practical courses) |          |         |
| 9      | Any other                                  |          |         |

Name of the program: M.Tech in Automation and Robotics Semester –I/II Year - I

Name of the Course: Machine Learning

Course Code: AI24512 Core/Elective/Other: Elective

**Prerequisite:** 

1. Basic programming skills (in Python)

2. Basics of probability and statistics

#### **Course outcomes:**

- 1. Ability to analyze mathematical models of Machine Learning
- 2. Ability to develop Machine Learning models for real life applications

### **Description of contents in brief:**

#### Unit-I

Introduction to Machine Learning, Revision of probability theory, random variables and linear Algebra

#### Unit -II

Supervised Learning, Hypothesis space, Evaluation of Learning algorithms, Regression, Linear Regression, Gradient descent algorithm

#### Unit-III

Classification, Logistic Regression, Multi class classification, Regularization, Naive Bayes Classifier, Decision Tree, K nearest neighbor algorithm, Ensemble Learning, Bagging and Boosting, ADA boost

#### **Unit-IV**

Feature selection, Branch & Bound, sequential forward, sequential backward and bidirectional, Feature Extraction, Principal Component Analysis, Support Vector Machine, Hard and Soft margin SVMs

#### **Unit-V**

Unsupervised Learning, Clustering, K means, Fuzzy K means and hierarchical clustering, Neural Network, Evolutionary Algorithms. Machine Learning Applications

#### **List of Books:**

- 1. Pattern Recognition and Machine Learning, Bishop, C.M.Springer
- 2. An Introduction to Statistical Learning with Applications in Python, Gareth James, Daniela Witten, Trevor Hastie, Robert Tibsherani, Jonathan Taylor, Springer Texts in Statistics

#### **List of Reference Books:**

- 1. Foundations of Machine Learning, Mehryar Mohri, Afshin Rostamizadeh, Ameet Talwalkar, MIT Press
- 2. Machine Learning, Mitchell, T., McGraw Hill

#### **URLs:**

- 1. https://nptel.ac.in/courses/106/106/106106139/
- 2. https://nptel.ac.in/courses/106/105/106105152/
- 3. https://nptel.ac.in/courses/106/106/106106213/

Name of the program: M.Tech in Automation and Robotics Semester - I Year - I

Name of the Course: Digital Image Processing

Course Code: CS24505 Core/Elective/Other: Elective

**Prerequisite:** NIL Course outcomes:

- 1. To articulate image enhancement and restoration techniques
- 2. To examine image compression techniques
- 3. To implement image segmentation techniques
- 4. To represent and recognize different images.

#### **Description of contents in brief:**

- Unit-1: Digital Image Fundamentals: Digital image representation, fundamental steps, elements of visual perception, image sensing and acquisition, image sampling and quantization, relationship between pixels and colour models.
- Unit-2: Image Enhancement, Morphological operations: Spatial domain, gray level transformations, histogram processing, basics of spatial filtering smoothing and sharpening frequency domain filters
- Unit-3: Image Segmentation: noise models, mean filters, order statistics, adaptive filters, band reject filters, optimum notch filtering, inverse filtering, wiener filtering, segmentation: edge detection, edge linking and boundary detection, region-based segmentation, morphological erosion and dilation.
- Unit-4: Image Compression: Compression fundamentals, image compression models, error free compression, Lossy compression, image compression standards.
- Unit-5: Morphological operations in image processing, Feature analysis, Deep Learning and Machine Learning methods for image processing

#### **List of Textbooks:**

1. R.C.Gonzalez and R.E.Woods, Digital Image Processing, Prentice Hall, 3rd edition

#### List of Reference Books:

- 1. A.K. Jain, Fundamentals of Digital Image Processing, Prentice Hall.
- 2. S.Sridhar, Digital Image Processing, Oxford University Press

Name of the program: M.Tech in Automation and Robotics Semester I/II Year I

Name of the Course: VLSI Design

Course Code: VED24101 Core/Elective/Other: Elective

**Prerequisite:** NIL Course outcomes:

- 1) To understand and prepare CMOS circuits
- 2) To design CMOS and prepare design layouts
- 3) To learn concepts of design of VLSI sub-systems

### **Description of contents in brief:**

#### Unit-I

Introduction to MOS Technology - CMOS fabrication. Basic Electrical Properties - NMOS Inverter, Zpu/Zpd ratio, CMOS Inverter, Regions of Operation, BiCMOS Inverters.

#### **Unit-II**

Scaling - Scaling models and factors, scaling factors for various device parameters. MOS circuits and logic design: Switching logic, gate logic, Two/Three input NMOS, CMOS & BiCMOS, NAND & NOR gates,

#### **Unit-III**

CMOS logic structures - Pseudo nMOS, dynamic CMOS, clocked CMOS, CMOS domino, NP-domino logic, clocking strategies.

#### **Unit-IV**

Introduction of VLSI Design Methodologies - Design Description domains.

#### Unit-V

System design and methods - CMOS design methods, CMOS design options. Layout design rules and Stick diagrams. Introduction to ASIC Design

#### **List of Textbooks:**

- 1. Basic VLSI Design Douglas A. Pucknell & Kamran Eshraghian
- 2. Principles of CMOS VLSI design Neil H.E. Weste & Kamran Eshraghian

#### **List of Reference Books:**

- 1. CMOS VLSI Design Harris, Weste, Banerjee
- 2. CMOS Circuit design Jacob baker, Harry wili & David Boyce
